**DETAILED ACTION**

***Response to Arguments***

Applicant's arguments filed 11/25/2003 have been fully considered but they are not persuasive.

In Response to Applicant request for a foreign application, the Examiner inadvertently selected the incorrect form paragraph, the appropriate 102(e) form paragraph reads as follows;

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The Examiner regrets having confused the Applicant. Never the less had the applicant seen Ratakonda's US filing date, he would have noted that a foreign filing date was not necessary since Ratakonda's US filing date predated the Applicants foreign priority date.

In Response to Applicants arguments that Ratakonda fails to teach creating a region of intensity histogram base on motion compensated frames, the Examiner disagrees with the Applicant. A careful reading of columns 17 and 18 in particular column 17 lines 5-16, and column 18 lines 19-32. Furthermore it was well known that motion compensated frames are also known as P and B frames see column 14 lines 34-41, therefore the current invention as claimed boils down to creating a histogram of P and B Frames just like Ratakonda.

The Examiner stands behind his initial rejection.

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Ratakonda.

Claim 1: A method for processing digital images received in the form of compressed video streams comprising the step of;

Determining a region of intensity histogram based on information on motion compensation of inter-frames. (See Ratakonda column 16 lines 9-17 as well as column 11 line 45 wherein he teaches that motion implies a change in intensity, thus the histogram is by nature a region of intensity histogram, as well as columns 17 and 18 and arguments above.)

Claim 2: The digital video processing method according to claim 1, before step (a), further comprising the steps of;

Receiving video streams (See figure 7 item 132, these bit streams are video.)

Art Unit: 2613

Grouping the video streams into a plurality of groups using a predetermined algorithm;  
(See column 4 lines 36-29 clearly implying that the video sequences are segmented into groups.)

Selecting a group to be processed. (See column 14 lines 28-47 wherein he shows that he is working on a selected sequence not the whole bit stream.)

Wherein in the step (a) the RIH of the selected group is determined based on information on the motion compensation of inter-frames. (See column 14 lines 37-41, as well as column 16 lines 9-17.

### ***Conclusion***

2. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
